

Our average Chlorine discharge is zero, Ph 7.6 and copper 0. The flow per month varies depending on how much we empty.

As for the additional the waiver, Kathy will have to apply for that.

Hi Dan,

This is what I forwarded to Kathleen yesterday. Now just waiting for her to respond.

Sincerely,

Shelley Puleo

Subject: Reapplication Submittal

Hi Kathleen,

Thank you for your recent corrections to your NPDES permit. There are just a few things that I need pertaining to Outfall 002:

In your current permit for the swimming pool discharge you are required to sample for chlorine and copper. Do you have current data which you could submit to me – it should be on your quarterly discharge monitoring reports. Also for the Part A pollutants which you did not sample; please request a waiver from testing.
